## - World Leaders in Solar Protection

### Blinds for internal and external applications

#### Case Study

A house on a golf estate with a sunny veranda and lovely views across the estate towards the mountains.

Fabric : **Soltis 86®**

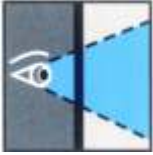

Blind maker : AC Screens

#### Solution : **Soltis 86®** blind material

The architects selected **Soltis 86®** from the range of solar protection materials manufactured by Ferrari. This material filters out approximately 86% of sunlight making the room cooler without the glare. The weave allows outside visibility while affording privacy to those inside. The hand held controls allow each individual blind to be quickly and quietly dropped from the ceiling. The blinds may be stopped at any stage during descent allowing the operator to respond to movements of the sun. These blinds run in tracks fixed onto the pillars without any glass doors or windows, effectively making a material barrier able to withstand a gentle breeze. These good looking blinds enable the owners to use their veranda even on the hottest days. The blinds also complement the design of the houses on the estate.

## Transparency and light

Visibility toward the outside

**Soltis 86®** maintains privacy and screens out sun glare, while at the same time retaining outward visibility which is particularly important in this application.

**Soltis 86®** filters and regulates the level of natural light according to your requirements. When the blinds are dropped you do not feel enclosed as **Soltis 86®** offers a remarkable degree of transparency, providing outward visibility that cannot be matched.

## Ultra Stable & Tear resistant

Won't sag

Tear resistance

**Soltis 86®** is a textile designed according to an exclusive and patented process which ensures that the textile will not lose its shape or its inherent physical strength despite the tensions generated by wind, rain, hail or other climatic conditions. For this reason, **Soltis 86®** is preferred by architects and specifiers the world over for large exterior panels.

## Preconstraint

Manufactured using the exclusive patented Preconstraint Ferrari technology, the Soltis textiles are maintained under tension throughout the entire production cycle. The resulting level of dimensional stability is extremely high, meaning the textiles do not deform during installation or over time.

### PRÉCONTRAIT FERRARI®: TECHNICAL TEXTILES

## Fire Retardant

Fire retardant **Soltis 86®** is not inflammable and will only smoulder in the immediate presence of flames

## Easy Maintenance

Thanks to its anti-dirt treatment, maintenance of the Soltis textiles merely involves a wash with water and a mild detergent. There is no mould, rotting or discolouration caused by moisture.

Fungistatic treatment

**5 Year Warranty** - backed by one of the leading manufactures in the world.

**Back-up and support from trained and experienced local suppliers.**
